

SMART CITY UNIVERSE

Understanding the ever-changing context of a dynamic society, we developed a set of solutions which orbit around the same concept: to create a sustainable modern platform for satisfying or even surprising the majority of ordinary people.

Personalized cloud-based hybrid frame: On the fly app service in combination with sensors and firmware for infos, discounts, active contribution.

Impersonalized cloud-based hybrid frame: A hybrid frame to boost the communication and information transfer towards visitors of the city.

Gamification: There's no better way of learning than playing with educative content a city can give to increase loyalty.

Virtual Tourism aid: Cloud-based tourist card to enjoy the most out of the city: guided tours, museum entries, restaurant offers.

Virtual Retail booster: Enabling SME's to boost their businesses in a smart way. Personalized offers, creating real-time added value.

Xpatloop: Interconnecting expats to help them to get along, and at the same time it lends a hand to City Hall and embassies.

Smart City Planning Tool: Interactive planning frame based on HoloLens and AR technology.

CitizenGuard: Protecting life and safeguarding the wellbeing of people by using a combination of ICT elements, i.e. applications, CCTV images.

Smart Routing: Our application secures dynamic optimization of transportation independently from means of transport, amount of stops, or volume of delivery.

Cloud-based Building Management System: Vesta, closing the gap between insight and action to make BMS easier.

CityNerve System: Scalable and adjustable IoT frame to leverage the multilateral functionality of an urban environment.

Dynamic Utility Management: Real-time measurements and actions to reduce wasting resources

Complex Parking: Cloud-based optimization solution for public or private transport, car sharing or smart parking.

Intelligent City Parks: Park maintenance, tree cadastral surveys, green surface programs.
